

Chapter 4 : Literals in Java

• What is a Literal in Java?

→ A value which is constant & is assigned to a variable is called as Literal in Java

Example -

127 - integer Literal

12.7f - float Literal

12.7 - double Literal [Default]

'Z' - Char Literal

true - Boolean Literal

"CodeCosmos" - String Literal

⊛ Where all do we have to mention the suffix to literals

→ ① float literals → f or F

② double literals → d or D (not mandatory)

③ long literals → L or l

⊛ Imp Note

int num = 9; → integer Literal

datatype ← int

↓ num

variable name
